Niagara Falls Blvd Area 5 Tree Survey and Sampling Trip Report EMD 03-03-2017.docx

Thanks to you both. After review, I added a few things. Let me know what you think. Is it HpGe or HPGe? Whichever, let's please revise all.

Chad, It looks like we need the highest reading in Zone 2

Lyndsey, the report does indicate that 5 additional trees were added to the original 10 planned. I just added this in the paragraph:

*To ensure that the representation of all the trees was met, an additional five trees were sampled from random locations within Area 5. **A total of ten trees were sampled via HPGe.** Refer to Attachment B: Photographic Documentation Log.*

Lyndsey, can we add soil samples as well to the statement below?

*The results of the individual tree gamma scan showed no levels exceeding the SSSL, this correlated with the results of the tree boring samples analyzed with the onsite HPGe indicated that radionuclides were not significantly different than the background wood sample **or soil samples** taken from a background reference area.*

I know it isn't apples to apples but it shows that the tree results are similar to background soil results. Also, we have background soil results right now but we do not have the background tree results. Lastly, I would like to keep this report draft until we obtain tree background samples, analyze and add to the report. As long as Lyndsey is comfortable with the data we have to release, we can do that. I will provide the person taking the trees the draft report. That leaves us the freedom to revise later down the road.

What do you both think?

Hi –

Please review the edits and make any additional comments to the report or the table.

Thank You

Chad
